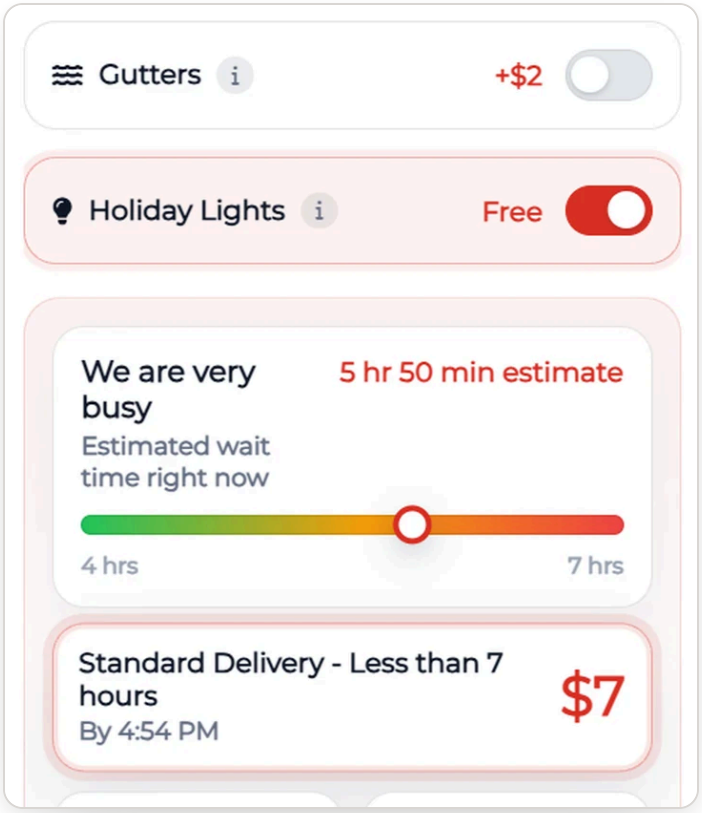
Holiday Lights

Add a free Holiday Lights view to any roof report and see light lengths and bulb and clip counts for every roofline.

Add Holiday Lights to an order

1. When you order a roof report, turn on **Holiday Lights**.
2. Place the order. The Holiday Lights view comes with the finished report.



Open the Holiday Lights view

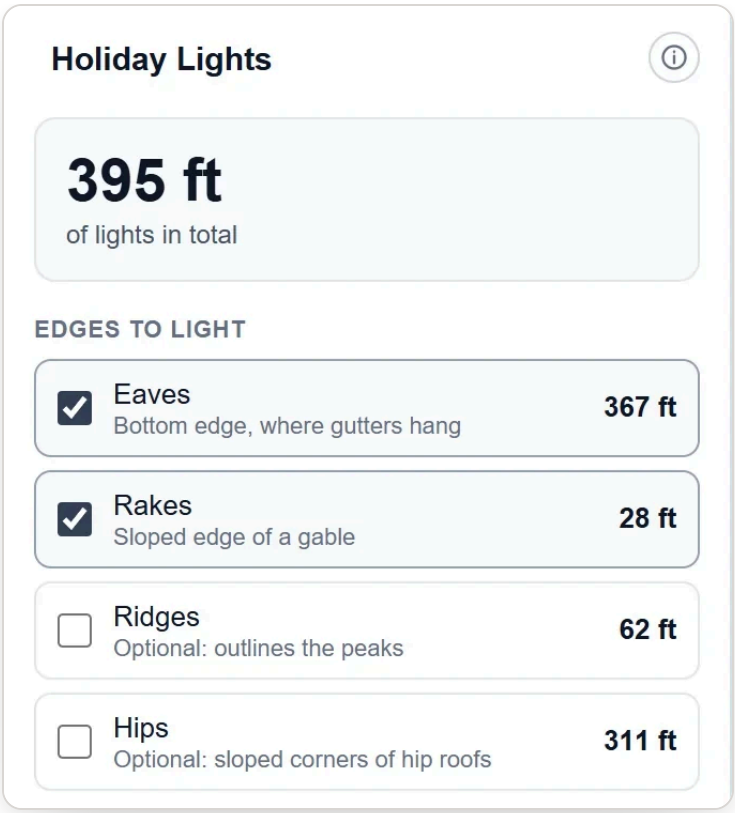
When the report is delivered, open the project and go to **Reports**, then the **Holiday Lights** tab. You can also click the lightbulb in the top-right corner of the 3D Model viewer, then **Open Holiday Lights**.

Each side of the house has its own color, and every run shows its length.

Plan the lights

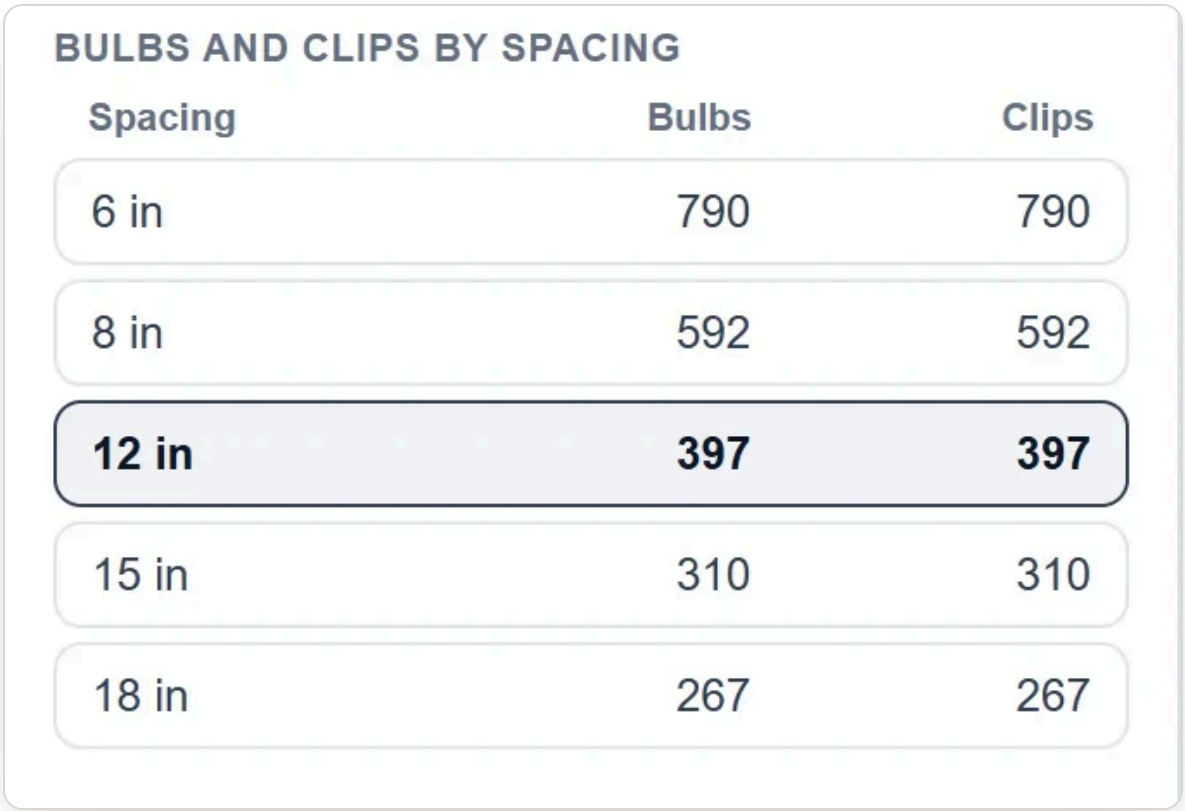
The total at the top updates as you choose what to light:

- **Edges to light**: Eaves (the bottom edge, where gutters hang) and Rakes (the sloped edge of a gable) are on by default. Add Ridges to outline the peaks, or Hips for the sloped corners of hip roofs.
- **Sides to light**: each side of the house is listed by compass direction with its length. Uncheck any side the customer isn't lighting. A side with eaves at more than one height is split into rooflines, such as Lower and Upper.



Bulbs and clips

Bulbs and clips by spacing lists how many bulbs you need at 6, 8, 12, 15 or 18-inch spacing, with one clip per bulb. 12 inches is the default. Click a row to show that spacing on the roof.



Move around the roof

Drag to orbit, scroll to zoom and right-drag to pan. Click **Reset view** to start over. Selections aren't saved; they reset when you reopen the view.

Questions

Does Holiday Lights cost extra?

No.

Can I add Holiday Lights after the report is ordered?

Turn it on when you place the order so it's included with the finished report.

How are the lengths measured?

Lengths are measured along each roof edge from your report.
